APL Turntable

APL manufacture a series of rotating valves that mount inside tanker hulls, through which crude oil is pumped. Bespoke Applications department at Lindhurst Innovation Engineers designed and manufactured a 3.5m diameter turntable to simulate the pitch and yaw of the valves in operation. Once a valve test starts the table has to oscillate for up to 3 months at a time

- APL manufacture rotating valves through which crude oil is pumped
- Bespoke Applications designed & manufactured a 3.5m diameter turntable
- Turntable simulates the pitch and yaw of the valves in operation
- Once a valve test starts the table has to oscillate for up to 3 months at a time
- Design, Mechanical & Electrical services with fabrication & installation from bespoke applications department at Lindhurst Innovation Engineers
